REAL WORLD TEST RESULTS

Product: MDVita EHR version 26

Qualified Period: June 30th, 2020 – March 31st, 2022

ONC-ACB-Certification ID: 15.04.04.2904.MDVi.26.01.1.200319

1. Summary

This document describes the MDVita EHR Real World Test (RWT) results obtained by executing the CY 2022 Real World Testing Plan for MDVita.

On Thursday April 21st, 2022 MDVita IT selected a list of health care providers that are users of the MDVita EHR and representative of the MDVita client population. The IT performed the test cases of the RWT plan in their production setting.

The MDVita RWT plan consists of 14 measures. 11 measures are automatically calculated by MDVita in the qualified period and 3 measures as answered by the users in a survey.

Base metrics used for the execution of the test plan:

- Care Setting: Ambulatory
- Qualified Period: June 30th, 2020 – March 31st, 2022
- Total health care provider clients tested: 14
- Client identifiers: A, B, C, D, E, F, G, H, I, J, K, L, M, N

For preserving the privacy of the clients we are using letters to identify each client. An internal IT document identifies each letter to a client.

2. Real World Test Results by Measure

RWT Measure #1. Number of Transition of Care C-CDAs Successfully Sent

Client A

Real World Testing Results				
Parameters	RWT Test 06/30/2020 - 03/31/2022

RWT Measure #12. What are the number of different HISPs/HIEs/HINs you connect to from your EHR?

Three clients (C, I, L) surveyed, their answer is 1 HISP. MDVita integrates with a single third party for DIRECT exchange. MDVita HISP of choice is EMR Direct

[Direct Messaging HISP, API Integration, and Identity Services | EMR Direct](#)

RWT Measure #13. Do you successfully record, calculate, and submit clinical quality measures to CMS using the EHR and if so, which CQMs were submitted?

The criteria is not widely used by our customer base as the survey was answered in a Risk Management setting the preferred CMS reporting mechanism is using Encounters data. We tested the measure in our own production-sandbox environment (HC2K-Demo)

RWT Measure #14. How many different syndromic registries do you connect with?

Three clients surveyed and their answer is none. Clients claimed electronics' Florida syndromic registry exception. The state of Florida accepts electronic syndromic data only from emergency rooms and hospital settings. MDVita is used and certified for Ambulatory care setting.
