REAL WORLD TEST RESULTS

Product: MDVita EHR version 27

Qualified Period: January 1st, 2024 – December 31st, 2024

ONC-ACB-Certification ID: 15.04.04.2904.MDVi.27.02.1.221020

Last Date Updated: 01/21/2025

1. Summary

This document describes the MDVita EHR Real World Test (RWT) results obtained by executing the CY 2024 Real World Testing Plan for MDVita.

On Monday, January 20th, 2025, MDVita IT selected a list of health care providers that are users of the MDVita EHR and representative of the MDVita client population. The IT performed the test cases of the RWT plan in their production setting.

The MDVita RWT plan consists of 15 measures. 12 measures are automatically calculated by MDVita in the qualified period and 3 measures as answered by the users in a survey.

Base metrics used for the execution of the test plan:

- Care Setting: Ambulatory
- Qualified Period: January 1st, 2024 – December 31st, 2024
- Total health care provider clients tested: 10
- Client identifiers: De-identified

For preserving the privacy of the clients, we are using letters to identify each client. An internal IT document identifies each letter to a client.

2. MDVita relied upon software by certified criteria used during real world testing procedures

Certified criteria	Criteria Name	MDVita relied upon software
315(c)(2)-(3)	Clinical Quality Measures Import, Calculate, and Report	PopHealth (Version 6.0)
315(g)(9)	Application Access.	EMR Direct Interoperability (Version 2017)
315(g)(10)	Standardized API for Patient and Population Services	EMR Direct Interoperability (Version 2021)
315(h)(1)	Direct Project	EMR Direct phiMail Server

RWT Measure #8. Number of API Queries Made with Data Element Results Successfully Returned

The criteria is not widely used by our customer base. We extracted test data information of the measure from our QA-sandbox environment (HC2K-Test). Two working modes were tested: Standalone-launch for a single patient, and EHR-launch (Population Services).

Test results. Performed during the qualified period

Email: support@hc2000inc.com

RWT Measure #12. What are the number of different HISPs/HIEs/HINs you connect to from your EHR?

Three clients (B, K, M) surveyed, their answers was 0 or 1 HISP. MDVita integrates with a single third party for DIRECT exchange. MDVita HISP of choice is EMR Direct, and not all clients activate the feature

http://www.hc2000inc.com/Pages/MDVita_API_Interoperability.htm

RWT Measure #13. Do you successfully record, calculate, and submit clinical quality measures to CMS using the EHR and if so, which CQMs were submitted?

The criteria is not widely used by our customer base as the survey was answered in a Risk Management setting the preferred CMS reporting mechanism is using Encounters data. We tested the measure in our own production-sandbox environment (HC2K-Demo)

☒	CMS135v12		Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) <=40% who were prescribed or already taking ACE inhibitor or ARB or ARNI therapy during the measurement period
☒	CMS136v13		Follow-Up Care for Children Prescribed ADHD Medication (ADD)	Percentage of children 6-12 years of age and newly prescribed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported. a. Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase. b. Percentage of children who remained on ADHD medication for at least 210 treatment days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.
☒	CMS137v12		Initiation and Engagement of Substance Use Disorder Treatment	Percentage of patients 13 years of age and older with a new substance use disorder (SUD) episode who received the following (Two rates are reported): a. Percentage of patients who initiated treatment, including either an intervention or medication for the treatment of SUD, within 14 days of the new SUD episode. b. Percentage of patients who engaged in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication for the treatment of SUD, within 34 days of the initiation.
☐	CMS138v12		Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period b. Percentage of patients aged 12 years and

RWT Measure #14. How many different syndromic registries do you connect with?

Three clients surveyed and their answer is none. Clients claimed electronics' Florida syndromic registry exception. The state of Florida accepts electronic syndromic data only from emergency rooms and hospital settings. MDVita is used and certified for Ambulatory care setting.

Exception Letter:

[meaningful-use-exclusion-information.pdf \(floridahealth.gov\)](#)
